

WHAT IS EJARI?

Ejari is a lease management system that caters for your entire "end to end" rental needs. Property owners and management companies can now manage their day to day tenancy contracts seamlessly through Ejari, creating a transparent environment between landlords, management companies, and tenants. It's a robust regulatory system that is built on worldwide best practices and methodologies pertaining rental business practices.

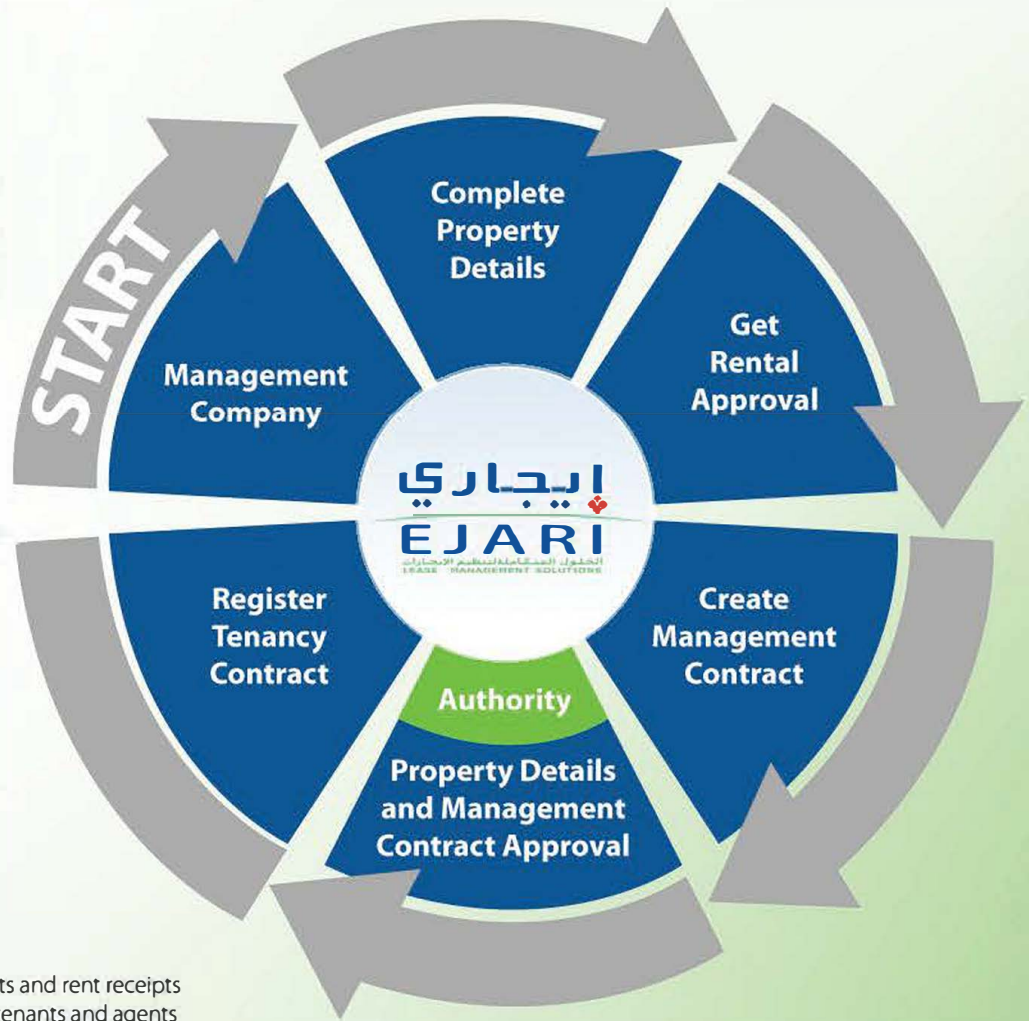

Ejari is built on international real estate markets' standards; however, it caters for Dubai Real Estate Regulatory Authority's requirements. It aims to effectively execute the provisions of the law regulating the relationship between landlords and tenants and to protect the rights of all parties involved in the rental agreement.

Ejari offers a set of services that goes beyond tenancy contracting to include renewal, cancellation and termination of agreements. In addition to that, it ensures that all types of payments, tenants information and properties details are captured and available at all times.

EJARI PROCESS
